Withdrawal Management Program for Men

The Lodge accommodates up to 7 men and offers a structured, tranquil, and intimate setting for our Withdrawal Management Program inclusive of daily groups, MAT education and counseling, and case management services. On-site medical staff is available 24/7 to assist with detox protocol and client needs along with comfort-focused and therapeutic-driven Behavioral Healthcare Technicians and clinical staff who further help clients navigate treatment within our continuum of care, including residential programming when appropriate.

Residential Treatment for Men

Adult males in our residential treatment program reside in the 40-bed Main House or 12-bed Lake House. Both residences provide a structured setting where clients receive medical care, participate in therapy, learn about disease and addiction, and develop the life skills necessary for success outside of treatment on their continued path to long-term sobriety.

Residential Treatment for Women

Our Langhorne residential program offers trauma-focused addiction treatment for women in the safe and therapeutic, 14-bed Farmhouse. We utilize a system of comprehensive care to address the unique experiences and treatment needs of adult women, including severe, untreated childhood trauma, low self-worth connected to intimate relationships, and the treatment of co-occurring disorders.
